TOMATOES

Most varieties should be set 4 feet apart each way, but the dwarf or tree varieties may be set closer, about 2 feet in the row and rows 3½ feet apart. One ounce produces 2000 plants. If young plants are bothered by bugs, use Sure-Noxum or Lime and Tobacco Dust (see page 12).

GROCERIES

A year ago we added a stock of groceries to our business, Mr. W. C. Thomas, a groceryman of long experience, in charge.

The result was very gratifying. We did a good business from the start and now extra help is required to care for the trade. A delivery service is maintained in the city.

While we do not especially solicit grocery mail orders and have no price list to send out, we are always glad to quote prices and make no extra charge for packing and shipping. Any orders sent us will have our prompt and careful attention.

To our customers who trade in Roswell we extend a special invitation to visit our grocery department.

We buy eggs, butter, fruit, and vegetables.

FIELD SEEDS

At the time we must print this catalog we can not give prices on Field Seeds, therefore we will issue a price list in February which will be mailed on application. We give a list and short description of varieties generally carried in stock. Be sure to send for the February list if interested.

CORN

We handle native grown seed corn as far as possible as we know it is better for this locality than seed brought from other states. However some varieties can not be obtained locally, these we buy where we can get the best seed.

MEXICAN JUNE. The best variety for the Pecos Valley. Stalks grow large and strong. Ears large, generally two on a stalk. Grain is white with a sprinkling of blue. The best variety for ensilage. A good drouth resister. Not bothered by worms.

HICKORY KING. Large grain, small cob, short stalk. A good producer, but bothered by worms more than other varieties.

BLOODY BUTCHER. Large ears, deep red grains. Heavy yielder. Does well in the valley, also in the mountains.

YELLOW DENT. The best yellow variety. A good yielder, not bothered much by worms.

WHITE PEARL. A favorite with gardeners for selling green. Large white ears.

POP CORN. White Rice, Pearl, Queen's Golden. The Pearl is the best as it is not bothered by worms like the other varieties.

SURE CROPPER. Medium size ears, short stalks. Good for selling green.

SMALL GRAIN

When properly planted and cared for all kinds of small grains produce profitable crops in the Pecos Valley. We should be shipping out instead of in.

WHEAT

TURKEY RED. This is the best variety for fall planting. Millers prefer this for their best flour.

MARQUIS. Best spring variety. Yields well, almost as good as Turkey Red for milling.

OATS

RED RUST PROOF. This is the only variety to plant in the Valley. Good for either fall or spring planting. Do not consider anything else.

BARLEY

Barley is used for green pastures as well as grain. Plant either spring or fall. Very hardy, will grow where other grains fail.

SCOTCH. The standard bearded variety.

RYE

Fine for winter pasture, stands cold well. A good soiling crop.

Send for Field Seed Price List

DROUTH RESISTING CROPS

These grains will grow and mature where corn will fail for lack of moisture.

WHITE KAFIR. Makes a good yield of very fine grain which is good feed for all kinds of stock. Especially good chicken feed.

RED KAFIR. Very much like the white except the grain is red. Not bothered by birds as much as other varieties.

DWARF Milo. Grain a light red. Larger than kafir. The best drouth resister of all.

FETERITA. A soft, white grain. Earlier than Maize, but shatters more easily.

CANE

EARLY AMBER. Grown chiefly for the fodder. Sown broadcast and cut like hay. It makes an enormous yield. May also be sown in rows like corn and cut with a binder. Fine feed for all kinds of stock.

SUMAC. A very fine cane, a little later than Amber, but a heavier yielder. Our best seller.

SEEDED RIBBON. Used principally for making syrup, but is also good for stock feeding. Large stalks, very sweet, heavy yield.

JAPANESE HONEY DRIP. Also a fine cane for syrup as well as feed purposes.

CLOVER AND GRASSES

ALFALFA. The great hay plant. One of the main crops of the Pecos Valley. Sow in spring or fall. Generally sown with Oats, Wheat, Rye or Barley for a protection.

SWEET CLOVER. Two varieties, White and Yellow Blossom. The White is most generally used. Grown mostly for bees. Makes a fine white honey. Bi-ennial.

WHITE CLOVER. Used for lawns, pasture and for bees.

KENTUCKY BLUE GRASS. Used in this locality chiefly as a lawn grass, for which purpose it is excellent. Sow any time in the year but does best in the fall or early spring.

BERMUDA GRASS. Fine for lawns, also pasture. Frost kills the tops, but the roots live over winter in this climate. Further north the winter kills it, but in the Pecos Valley it never dies. Therefore do not plant it where you expect to cultivate afterwards, for it will always be there. Chokes out all other plants. Propagates from roots and seed.

SUDAN GRASS. A large coarse grass which makes fine pasture and hay. Grows with the least moisture of anything of its kind. While it resembles Johnson Grass it is an annual crop and does not live over winter. A fine dry land forage crop.

JOHNSON GRASS. Generally regarded as a pest. Do not plant where you ever expect to cultivate for it will certainly be there always. A good grass to plant on waste land that can not be cultivated. Propagates from roots and seed.

ENGLISH RYE GRASS. Very much like Bluegrass except larger and coarser. Good for lawns if kept mowed. Fine for pasture.

MILLET. A good hay crop if cut before seed is ripe.

HUBAM ANNUAL SWEET CLOVER

Note what Ernest Nelson, farmer and bee keeper, has to say about it. Mr. Nelson lives seven miles southeast of Roswell.

"I planted Hubam April 1, drilling it into growing wheat. When I cut the wheat, June 5th, the Hubam was blooming. The wheat was removed from the field and by July 15, Hubam was blooming again. The bees had a great feast until August 15th, when I cut the Hubam for seed. It immediately sent up new growth which bloomed and the bees worked on it until frost. No irrigation was given after the wheat was cut. The Hubam mixed with the wheat straw was readily eaten by the cows. I shall follow the same manner of planting the coming season."

Hubam has all the good qualities of the biennial variety and has the advantage that it blooms the first year. This allows it to be grown with other crops.

We have a good supply of seed which we offer at the following prices:

1 lb. postpaid-----\$1.00 10 lbs. postpaid-----\$7.50

100 lbs. F. O. B. Roswell-----\$60.00

Sample on request.

PERUVIAN ALFALFA SEED

The best recommendation we have for this variety is the fact that farmers who already have it are planting more. It comes out earlier in the Spring, stands more cold, resists drouth better, has smaller stems and more leaves, and makes better hay than the ordinary variety.
